## The global economy in 2026

- ◆ US action in Venezuela is inevitably raising questions about the new world order...
- ◆ ...but the still buoyant markets will be steered by the macro picture and policy outcomes
- ◆ We recently raised our global GDP forecasts to 2.8% in 2025 and 2.7% in 2026

While 2025 ended with trade uncertainty abating and some optimism that major conflicts in the world may be moving a little closer to some kind of resolution, US action in Venezuela could once again upend the world order. The implications will only become clear in time, so with global growth still seemingly resilient and global inflation still mostly trending lower, financial market optimism has not faded.

### Muddling through

Uncertainty is here to stay though. The global economy in 2025 performed better than most had expected. Despite tariffs, global trade growth was strong, consumer spending held up. The gradual decline in inflation mostly continued. **We still expect the global economy to muddle through in 2026**, albeit supported globally by fiscal spending and the rollout of AI infrastructure.

**AI continues to drive multiple K-shaped expansions.** In the US, higher-income households (particularly baby boomers) are driving consumer spending, partly on the back of wealth effects from AI equity holdings. The US is also at the forefront of the surge in AI-related investment. This is benefitting Asian exporters that are most exposed to AI-related electronics production – Taiwan, Korea, and much of ASEAN – and related areas of the AI ecosystem. Such rapid growth in world trade is unlikely to be repeated in 2026, given tariffs and such a high base for Asian exports, but we still expect expansion.

The global economy beat expectations in 2025

The AI story continues to drive growth

### 1. US consumer spending remains robust

---

**Shutdown effects may cause volatility in US growth**
**Volatile US data**

Although there is now a raft of US data that have become available with the end of the government shutdown, **they are still hard to interpret**. Payroll softness may have been driven by deferred government job losses, and, while private payrolls are steady, Federal Reserve (Fed) Chair Powell has stated that they could be an overestimate.

And with immigration slowing and productivity rising, the unemployment rate edged back down to 4.4% in December. Also, US inflation has come down, but technical quirks are playing a role and globally input prices, particularly memory chips, are clearly on the rise. Moreover, government opening effects and tax cuts **should support US growth** in 1H26.

**Fiscal support**

Outside the US, **Europe is showing early signs of recovery** (Chart 3), though in 2026 much hinges on the execution of the fiscal support. Asia's macroeconomic fundamentals have improved, but the recovery in mainland China has underwhelmed, and further policy stimulus will likely be needed to provide a boost (Chart 4).

---

**We expect divergence in central bank policy moves**

Monetary policy divergence is expected to be a prominent theme this year. We expect Australia, New Zealand, and Sweden to join Japan in **raising rates**, while the European Central Bank and the Fed stay **on hold**. In contrast, we see the Bank of England delivering another 75bp of cuts and some emerging market central banks, especially in Asia, **continuing to ease**.

**3. The eurozone generally saw a robust 3Q, other than Germany**

Source: Macrobond

**4. China activity data have continued to slow**

**Our GDP forecasts**

---

**We forecast 2026 global GDP growth of 2.7%**

Our global GDP estimate for 2025 now stands at 2.8%, higher than the 2.7% at the start of the year. We also recently raised our **2026 forecast from 2.5% to 2.7%**, much of this is driven by a US upgrade reflecting payback after the government re-opening. That being said we are mindful that another possible US government shutdown could occur at the end of January, which could be a potential source of volatility. Another notable upgrade is in Japan, reflecting the recently approved fiscal stimulus.

### Key GDP growth forecasts

% year	2025 forecast		2026 forecast		2027 forecast	
World	2.8	(2.6)	2.7	(2.5)	2.6	(2.6)
US	2.2	(1.9)	2.3	(1.7)	1.8	(1.8)
Mainland China	4.9	(4.9)	4.6	(4.6)	4.7	(4.7)
Japan	1.2	(0.8)	1.0	(0.5)	1.1	(0.6)
India*	7.8	(7.2)	6.6	(6.3)	6.5	(6.8)
ASEAN-6	4.8	(4.4)	4.4	(4.2)	4.5	(4.6)
Eurozone	1.4	(1.2)	1.0	(1.0)	1.3	(1.4)
UK	1.3	(1.4)	1.0	(1.2)	1.3	(1.3)
Brazil	2.4	(2.4)	2.0	(2.3)	2.2	(2.0)

Note: \*India data is calendar year forecast here for comparability. Previous forecasts are shown in parenthesis and are from the Macro Monthly dated 6 October 2025.  
Green indicates an upward revision, red indicates a downward revision.

Important information on sustainable investing

"Sustainable investments" include investment approaches or instruments which consider environmental, social, governance and/or other sustainability factors (collectively, "sustainability") to varying degrees. Certain instruments we include within this category may be in the process of changing to deliver sustainability outcomes.

There is no guarantee that sustainable investments will produce returns similar to those which don't consider these factors. Sustainable investments may diverge from traditional market benchmarks. In addition, there is no standard definition of, or measurement criteria for sustainable investments, or the impact of sustainable investments ("sustainability impact"). Sustainable investment and sustainability impact measurement criteria are (a) highly subjective and (b) may vary significantly across and within sectors.

HSBC may rely on measurement criteria devised and/or reported by third party providers or issuers. HSBC does not always conduct its own specific due diligence in relation to measurement criteria. There is no guarantee: (a) that the nature of the sustainability impact or measurement criteria of an investment will be aligned with any particular investor's sustainability goals; or (b) that the stated level or target level of sustainability impact will be achieved.

Sustainable investing is an evolving area and new regulations may come into effect which may affect how an investment is categorised or labelled. An investment which is considered to fulfil sustainable criteria today may not meet those criteria at some point in the future.
